

5. Bill and Melinda Gates Foundation emails and research proposal
Please note Mr. Gates is now lecturing America on the low standard of education and the lack of basic research. How good an example can he be considered if he can't even read a research proposal or look for new basic research that has been vindicated against great odds? However easy it is to pick on Mr. Gates please note the foundation is called the Bill and MELINDA Gates Foundation, and as a parent do you feel Mrs. Gates should have been involved for the future good of her own children? What would you have done?

Email dated 31 Jan. 05 Dear Ms. Jones/ Bill and Melinda Gates Foundation
Thank you for your reply. However, I must point out to you that I sent you specific examples of established researchers who have failed. I can only hope you are not funding more failures since VTT points out AIDS is more serious than the disease itself. The world is grateful the Gates Foundation is funding research, but if Gates has no courage to handle controversial research, i.e., research that has failed, you are just funding more failure. I am truly sorry that the Gate's Foundation is not forward looking enough to see this. Again, it is like you are funding established polio researchers to bypass Salk. Thank you for your polite reply. Edward A. Greenhalgh

Dear Mr. Greenhalgh:

Thank you for sending your letter to the Bill & Melinda Gates Foundation's Global Health program. We were pleased to have an opportunity to review these materials and learn about your planned activities.

Because HIV/AIDS is a priority for improving the health of populations in developing countries, the foundation has already made a commitment to support interventions through other projects. The foundation's investments in this area will be undertaken through these existing initiatives and we are therefore unable to provide the requested funding.

We are pleased to know that you and your colleagues are committed to this important work. We thank you for the opportunity to review these materials and wish you every success in the proposed activities.

Sincerely,

Stephanie Jones
Grants Inquiry Administrator

Dear Ms. Steohanie Jones , Thank yo for your email reply. I converted the document to the body of this email , plus I added a section to follow called the Proposal in its Basic Form. I most respectfully ask your indulgence special circumstances ; I can not stress how many hardships had to be overcome to continue the research and develop the theory to date. I most sincerely thank you for your reply and all your considerations . Edward A.Greenhalgh

FIRST DOCUMENT:

Special Considerations Research Funding Appeal

To the Bill and Melinda Gates Foundation

Attention , Ms. Stephanie Jones, Inquiries Administrator

Thank you for your kind reply, but because of special circumstances I most respectfully ask that you extend your kindness in reading the following for better a better understanding. The misconception of the urgency of AIDS/cancer research : most research is done at a lackadaisical pace with centers being nothing more than "money funnels" to be stretched out over years to provide guaranteed employment for family and friends with real answers threatening this cozy system. Real example, Salk's vaccine killed the polio funding industry and Salk was hated by his colleagues, even though he helped humanity . AIDS/cancer have become similar industries. To get around this hostile industry I am asking for your help and understanding. My documented history proves that I do find real answers, but unfortunately such answers threaten dead end researchers. You have to decide if the Gates Foundation wants to help fund these real answers that will benefit society.

My words may appear blunt but AIDS/cancer deaths are very blunt and require blunt research to provide real answers. I have a proven history of finding such real answers ; I.e., 1987 I informed the government of the Cell Death signal Gene and expected (mistakenly) that they would want to know : I ended up black listed. Not until circa 2002 did U of T "prove" this cell death gene: 15 years later . NB. how the funding funnel was preserved. I used the term black listing because it is important since I believe this will close

your normal funding channels to me; your formal forms will not be able to be filled out properly, not because of my abilities or creativity but I can not match the bureaucracy. You are asked to think "outside the box" , which may be an over used expression, but how are you going to get new ideas if you can't help creative thinkers who have run afoul of the bureaucrats ? And that then begs the question, Does the Gates Foundation really want the real answers to these difficult problems, or is there a hidden advantage to being a partner of the funding funnel ?

The foundation is called the Bill and Melinda Gates foundation . Bill Gates is so prominent in the media that it is too easy to snipe at him. I do not know anything about Melinda Gates , but if she is anything like my wife she is very important to her husband who listens to her advice. Mr. William F. Buckley jr. said that he would rather be judged by 12 ordinary citizens drawn at random from a Mass. phone book than any elite colleagues at Harvard : the "ordinary" people of America have more sense and better judgment , which is why I am requesting that you ask Mrs. Gates to read two items from my website, www.cancerfraudbadbiotech.com , 1) Mass Extinction/SARS and 2) the 2004 Revised Section . You can hard copy these for her and they should only require ½ hour to read. Essentially they encapsulate my research goals, where it is going and the struggle to overcome the black listing and other difficulties , and the overall importance to society : something that bureaucratic forms simply can not cover or credit . Like Mr. Buckley jr. , I respect the general public and have reached out to them for help , and they have been sympathetic , and the website is growing. Mrs. Gates can form a complete opinion which can be presented to the Foundation .

Long story short : I will find answers. I have survived my own cancer . I have pushed cancer research by my sheer doggedness but there has been a terrible price to pay for not only myself, but my wife and our families: black listing does cause terrible hardships. To this, please read from the website the letter to Pres. Godsoe of the Bank of Nova Scotia entitled Scholarship Fraud and Bad Biotechnology. I had funding to take to Dr. Rosenthal , an AIDS researcher but he refused. Dr. Rosenthal since 1992 has only produced failed AIDS vaccine, so you must look at his (lack of) professionalism to be able to freely collaborate. I do and will find answers, but I can no longer cope or even survive without help. Your help. I need financial backing to finish the Viroid Thermodynamic Theory on the Origin of Life (see Dr. James Lovelock's comments in the Coombe Hill letter from the site menu). This project will explain pathways in cancer and AIDS not considered before and will lead directly to practical applications (just as I saved my own life with my research theories). And to Mr. Gates, the Chaos theory of virus thermodynamics has implications to artificial intelligence in computers just as it does in the evolutionary background of organic life. The ramifications of these theories are more than first meets the eye. But, you must not be blinded by bureaucratic formalities that would

restrict my approaching you .

I hope I have presented a positive argument and will hear from you further.
Thank you , Edward A. Greenhalgh

Please note the Word Pad Attachment, Document, the Proposal in its basic form

The Proposal in Its Most Basic Form

This document talks about what the Gate's Foundation is asked , what it will receive and how this benefits humanity.

Premise 1. Dr. Kary Mullis , nobel prizewinner, said most cancer researchers are lying to keep their jobs. 50 +yrs have passed since the formation of the ACS w/o a cure for cancer. In 1987 , E.A.Greenhalgh proposed the Cell Death Signal Gene and was blacklisted. Researchers refused to help because funding was threatened : though discoveries could be speeded up a new idea threatened outdated ones. The new idea has been proven right.

Premise 2. AIDS researchers in the media have stated they were arrogant in the 80s thinking they could find a cure/vaccine easily. They were wrong.

Fact: Dr.Rosenthal turned down collaboration and has never found a successful (Salk polio vaccine success benchmark) AIDS vaccine.

Fact : Greenhalgh has been suppressed from presenting new theories to society in the proper format even though receiving supportive opinions from respected persons. Greenhalgh's work has been vindicated while his detractors proven wrong.

Fact: new correct ideas are critical of outdated cronyism ;i.e., Pasteur and the Germ theory. New ideas receive hate and plagiarism. The Gate's foundation could open doors and be recorded in history as a great benefactor.

The Proposal :New Ideas must be Heard

1. You are asked to fund the completion of the Viroid -Thermodynamic Theory on the Origin of Life (VTT) text format : think of it as a geeky Darwin asking you to help grant funds to finish the Origin of the Species.

2. The cost : approx. 100,000.xx dollars

3. The Result : a complete compendium on AIDS/cancer and emerging diseases and how these mechanisms interact with the environment and people.The artificial intelligence of molecules and the environment : this has much broader ramifications . Important pathways and

techniques will be made clear, just like the work with Cell Death Signal in 87.

4. The completed VTT will then be presented at an international symposium : something not realistically possible without your backing. And the expression of many of the topics will allow others to come forward with new ideas who have been muffled by cronyism etc., also.

5. Having completed VTT , I can then turn theoretical into practical. Proof : I had cancer and am alive. Fact: my former supervisor has died of cancer. Whose work /theories proved to be more valid in the hard practical reality? PROOF!

This is what I am asking of the Gate's Foundation and why. Perspective : I have put 100% of my assets into the project over the last 15 or so years, but the Gate's Foundation is only asked to invest approx., 0.000 000 001% of its assets for only one year . Like the discovery of insulin, the results may belittle your investment.

We will all be judged by history , how will you come out? Do you have the wisdom to see beyond your forms to the meat of the real importance of this project ? I can not stress enough how much I have accomplished with so little while battling terrible odds , and so must ask you , just what is possible with your help?

Thank you. Edward A. Greenhalgh
