

6. Goldman Philanthropic Foundation Emails

These are some of the emails sent to this organization asking for funding and the reason why. None of the groups I approached are meant to be represented any differently from the others. What I wish to point out to the public is that I have continuously been pursuing the research and up grading the theory, and the theory has been continuously supported by what outside researchers later find, and remains ahead of the mainstream academics: wouldn't it be nice if someone would help. I would only like to point out with these emails is that I've tried to approach these people as a person. The Nazis were able to kill the Jews by depersonalizing them. I presented the facts in the good bad and ugly and asked them to form an opinion. They have the evidence of wrongdoing but instead of taking a personal interest they chose to hide behind forms. See letter to RCMP PCC; Holocaust Denial. About forms, I was early on offered an MRC scholarship by a pharmaceutical company with the provision that I find an institution to work with me. Everyone turned me down, but please remember all the cancer and AIDS commercials that you see crying for money and these institutions turned down money. MRC scholarships are only good for 5 years and after that you are out of date. Neat, huh! So if you go and fill out forms, the easiest way out is to say, "sorry, you are out of date and our forms don't allow that." That is why I've approached these people expecting a personal approach would highlight the good of the research over the blacklisting. What do you think?

And Stem Cell research is going to depersonalize human tissue to the level of commodity, do you think government and pharmaceuticals are up to the standards required to respect the dignity of human life and not start a "new type of slave trade?" You should speak up because it will go ahead, with the issue being, what are the MINIMUM standards that you and society are willing to accept?

Emails follow: **27 June 2004 to Goldman Philanthropic Partnerships**

Dear George N. Goldman and Judith A. Goldman.

Please consider this very serious request for funding of the Viroid Thermodynamic Theory on the Origin of Life (VTT) which will uncover underlying relationships between stealth viruses, cancer and oncogenes and the new emerging diseases. Dr. James Lovelock, creator of the GAIA theory has had kind words, and Noam Chomsky said a section could be of phenomenal importance. Like Darwin , there are serious detractors , but Nobel prize winner Kary Mullis has stated many scientists are simply lying to keep their jobs : the proposal is too important for farsighted people not to consider.

RESEARCH PROPOSAL :

To outline and explain the underlying relationships, mechanisms of operation between stealth viruses , oncogenes, cancer and the genome. This will encompass the relationship of viroids, bacteria and prions already started in the Viroid Thermodynamic Theory on the

Origin of Life (VTT). VTT explores how disease controls and directs evolution , which may simply be an energy conserving mechanism (hence Thermodynamic Component). The proposal is that you grant research funds so VTT may be developed into an overall evolutionay book format so mecahnisms and reactions may be explained which will lead to direct clinical studies, and to spur on other researchers , and may be correct mistakes or prevent possible disasters (i.e., Monsanto says it has genes in its canola it can't account for). The funding proposal would be one year and the model for the money grant would be similar to that granted to Mararet McMillan to produce her important book, Paris 1919.

My credentials and vindicated theories may be found on my website, www.cancerfraudbadbiotech.com . VTT may prove to be as important as Darwin's Origin of the Species which would not have existed without the help of good people also. His detractors were fighting for their jobs too, because if he was right, then they were wrong, and the degrees they were selling would be worthless. The harm of allowing scientific lies to persist is shown by Piltdown Man and the Virgina Sterilization program , both used by Hitler to support the Nazi misuse of Darwinian theory. My detractors are not so much comitted to academic freedom or scientific truth as to grant money and jobs for family members; sad but true.Please note, all my predictions of disasters based upon corrupt science and government (i.e., Walkerton e.coli tragedy etc.) have proven correct. See my website for more details, but realize that the Surgeon General of the United States would not put the prestige of her office on the line and send her regrets if she was not deeply touched by the wrong.

Your criteria cites, to prevent catastrophic diseases , then read, Mass Extinction/SARS and the 2004 revised section on the website: your support of this work may be the most important action you undertake. Please be sure to read the Mission Statement on the website as it will answer many of your questions. I may be reached by the contact info on the website. Good people ask why people didn't speak up about Al Queda , 911 or Abu Garrb : may be they did but no one would help them . I am now asking for your help to help society. Thank you. Edward A.Greenhalgh

Personal Note : my MP, Andrew Telegdi will help block the deportation of a former Nazi SS death squad member , but will not even meet with me to discuss fraud blocking cancer research. Please consider this when you think about my detractors.

Dear Mr. Greenhalgh-

Thank you for contacting us about supporting your VTT. At this time we are not accepting any unsolicited research proposals. If you visit our website at www.4cures.org, you will see that there is a Culpeper Biomedical Pilot grant program that we administer. If you think your research request meets those guidelines, we would gladly accept an application from you.

All the best,

Bruce

Subject: Research Proposal :Catastrophic Disease Mechanism Evolution Reply Request

27 June 2004 to Goldman Philanthropic Partnerships

Dear George N.Goldman and Judith A. Goldman.

Please consider this very serious request for funding of the Viroid Thermodynamic Theory on the Origin of Life (VTT) which will uncover underlying relationships between stealth viruses, cancer and oncogenes and the new emerging diseases. Dr. James Lovelock, creator of the GAIA theory has had kind words, and Noam Chomsky said a section could be of phenomenal importance. Like Darwin , there are serious detractors , but Nobel prize winner Kary Mullis has stated many scientists are simply lying to keep their jobs : the proposal is too important for farsighted people not to consider.

01 July 2004

Dear Goldman Philathropic Fund ,

I read somewhere Ben Gurion was pushy. I am not Jewish, but when we are down , I tease my wife that we are like the State of Israel in the early years, they would use any crap (Bf 109s were the first air force) given to them and pull off miracles to survive. Look at the quality of my website (www.cancerfraudbadbiotech.com) vs. the power of my detractors ; now imagine the quality of the work and what could be uncovered scientifically if some bright person would just help me. Ben Gurion annoyed people too.

It would be very kind if you could make a reply, one way or the other. I have always been polite , and , although you may not think it is fair for me to approach you this way, please consider my situation, and you will see the funding I have lost to malice, life is not fair. Sometimes it takes good people to make it fair. Please see the attachment sent to the new Prime minister of Canada. He may not think it fair either , but we are talking about human civil rights, and crime. Think about it, are you willing to accept institutional lying? If so how can you believe stem cell researchers will be ethical ? GM foods safe? We need honest truthful institutions and researchers, and if you don't know any, then repeat, how is science safe? Thank you for your time. A brief reply would be courteous . Edward A. Greenhalgh

Dear Mr. Greenhalgh,

You are welcome to determine whether your research proposal would qualify and then apply for a Culpeper Biomedical Pilot Initiative Grant at any time. The required information is listed on the website at <http://www.goldmanpartnerships.org/Culpeper/CulpeperBiomedicalPilotInitiativegrants.htm>

Here are the pertinent instructions:

Proposals to the foundation must be sent by mail only (**in triplicate**) and must include the following:

- Name, address, **e-mail address**, telephone/fax numbers of **project contact**

- Project title and hypothesis, specific quarterly aims and goals, proposed methodology and plans (Not to exceed two pages, single-spaced)
- A brief summary, giving a general, layman's explanation of the research and its overall importance (Not to exceed one-half to three-quarters of a page, single-spaced)
- Selected key references
- Project budget and justification
- Other funding support, with clearly written assurances as to absence of overlap (if none, please so indicate)
- Curriculum vita(ae) of researcher(s)
- Letter of support from director of institution or organization
- A copy of the applicant's sponsoring institution's federal tax-exempt letter

Receipt of proposals will be acknowledged by e-mail. In addition, all applicants will be notified in writing as to the final determination of their applications.

Thank you for your inquiry.

Sincerely,

Dr. Bruce E. Bloom

Subject: Fw: Culpepr Biomedical Pilot Program/EAGreenhalgh 29 july brief reply please

29 july 04 , Dear Mr. Bruce E. Bloom,

I have not received a reply to my Culper Program email. I appreciate that you can not respond ovely quickly nor to all requests . I also appreciate that my scientific battle is unwelcome by many who do not want to face corruption in science. The 911 Commission has found a serious lack of imagination in dealing with the terrorist threat. I predict a biological tragedy, not due to my brilliance, but due to corruption in science. It is preventable, like a second terrorist attack on your country, but you must want to face it. If you lack the imagination or courage to do so, I do understand, but a brief reply would be most appreciated . Thank you for you consideration and earlier reply. E.A.Greenhalgh

Subject: Culpepr Biomedical Pilot Program/EAGreenhalgh

12 July 2004, Dear Mr. Bruce E. Bloom,

Thank you for the email on the Culpepr Biomedical Pilot grant program. I visited your 4cures.org site and was quite astonished ! Please note on my www.cancerfraudbadbiotech.com site you will find material sent to the Min. of Health in 1987 explaining the Cell Death Signal (gene) theory and how you could tell tumours to die, and "wouldn't HONEST researchers want to know ?" This appears to directly correlate with the Mayo Clinic program to tell cancer cells to self destruct. Please note all my research proposals were sent to the major pharmaceuticals including GLAXO. I KNEW in 87 that I was blacklisted , but I knew the research theories MUST help people with cancer . So I developed the plan to put the theories in front of as many researchers as possible so they would be developed irregardless of the blacklisting. Please be realistic how well would I (a nobody) be received just showing up at conferences, especially with the slander that goes with blacklisting ? Please compare on your website 1) UAZ where they are programming patients own immune cells to attack cancer. This is important in VTT because it wants to understand the communication of HIV with immune cells etc , and cancer acts this way too. 2) Harvard's Osher Anti Oxidant study, also important noted in 87 , and my own health. Plus, 3) the Sloane Kettering Breast Cancer Botanical Study, also important to my own health.

Please consider, if not yourself, the public now must admit, more likely than not, I succeeded in pushing cancer research in these directions, and they will have to wonder why I wasn't helped, and how many deaths were unnecessary? In all fairness, I must include a new section on my website asking the public to look at these programs and compare them to the original theories put forward many years ago and blocked to cover up the academic fraud at UW and form their own opinions.

About Sloane Kettering, if you wish, I can share the research proposals sent to Mr. Arie Kopelman/Chanel sent by fedex 27 Sept. 1999. Although I spoke with his secretary, he was on vacation in Europe and never got back to me.

Please understand on the 13th of July 04 I am going for a CATscan , and like 4) your lady at Mass. U ., I , too, turned down chemo and radiation to use botanicals, and am cancerfree. In 97 I had testicular cancer , but unlike Lance Armstrong, I never developed any secondary cancers and 20 plus catscans later and cancer free without the secondary harm of chemo etc.

I do believe I match your requirements . Do you want a formal proposal because the site did not seem to specify? Do you need more information?

I wish to work with good people, but they must be mature and realistic; the University of Waterloo and Min. of Health situation must be compared to Ford in Germany: they finally paid compensation for the use of slave labour under the nazis. I also read that in the spring of 45 Henrich Himmler tried to shake the hand of the international Zionist leader saying they should let bygones be bygones and bury the hatchet. My point is that some harm is so serious that justice must be served and the harm can not be trivialized : compensation and atonement must be made. If you and your people can understand that, then we will work well together. I look forward to your reply. Thank you. Edward A.Greenhalgh
