

Thanks for sending. The deluge of e-mail is so enormous that I have to put off attachments and websites until I find a little free time. Hope it will not be too long delayed, but cannot promise. Too great an overload. The issues are certainly of importance, even phenomenal importance.

Noam Chomsky

04 Jan 04 Dear Prof Chomsky,
As a watcher of our society and a critic , you may be interested to see my website, www.cancerfraudbadbiotech.com and from the menu select , Mass Extinction/SARS. As an academic, you may say science and government are naturally corrupt, but in the new age we live in , can society afford 19th century standards for a science that can so drastically kill 80% of our population because it chooses to lie about standards. Mad cow and SARS are just the tip of the ice berg. Dr James Lovelock (GIAI theory) has said nice things about me, and your former Surgeon General has regretted my treatment. IS our society safe if its "guardians" the government chooses to suppress people who tell the truth? I hope you find my piece interesting . Thank you. Edward A.Greenhalgh
